

Anfo Pressure Loader

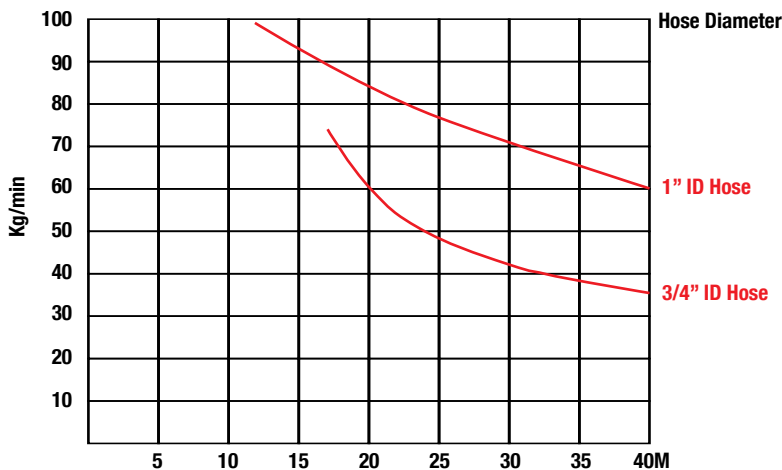

We have produced a range of "Anfo Pressure Loaders" from 25kg to 500kg capacities.

Features:

- Full rated load capacities;
- Department of Industrial Affairs approved (Australia Wide);
- Occupational Health, Safety and Welfare Regulations, 1995 Part 3 Hazard Identification - and Risk Assessment have been applied;
- Extra Strong mounting frame incorporating four legs;
- Mounting Pads plus mounting ring standard on all sizes for site mounting;
- Unique removable screen in the filling cone to eliminate blockages at discharge point, both from prill balling and foreign objects being left on top or falling into the unit when not in use;
- Earthing lug provided on all loaders at discharge point;
- Standard sealing ring or optional replaceable sealing ring available on all sizes;
- Improved single and dual remote controls, available with all sizes, as optional extras;
- Earth cables available as an optional extra;
- For acidic climatic conditions, stainless steel manifold fittings, eg: Valves, Gauges, regulator etc. are available at extra cost;
- Client specified vessels designed to suit specified mining requirements;
- Full range of stock for prompt and efficient delivery.

GENERAL INFORMATION ANFO LOADERS

These pressure vessels are designed and constructed to AS1210-1989 standard for Unfired Pressure Vessels Class 3. The material is steel plate AS 1548-7-430 with operating mains air pressure up to 690kpa. Approval has been given in all States. Pressure Loaders are designed to charge prilled anfo into blast holes using 3/4" or 1" lo stat hose. All units are supplied with manual control or the optional remote control (either single or double remote). The charging rate relates to the size of the loading hose as shown in the graph. Charging density between 0.9 and 1.0kg/cub.dm.
